

DÉCLARATION DES PERFORMANCES

fischer innovative solutions

DoP: 0153

pour système d'injection fischer HT II pour maçonnerie (Chevilles métalliques à injection pour maçonnerie) – FR

1. Code d'identification unique du produit type: **DoP: 0153**

2. Usage(s) prévu(s): **Ancrages de maçonnerie pour lesquels des exigences de résistance mécanique et de stabilité ainsi que de sécurité d'utilisation doivent être remplies. Ils servent à fixer et/ou ancrer des éléments structuraux (contribuant à la stabilité des systèmes) ou des éléments lourds, voir annexe, en particulier annexes B 1 - B 10**

3. Fabricant: **fischerwerke GmbH & Co. KG, Klaus-Fischer-Straße 1, 72178 Waldachtal, Allemagne**

4. Mandataire: --

5. Système(s) d'évaluation et de vérification de la constance des performances: **1**

6. Document d'évaluation européen: **EAD 330076-00-0604**

Évaluation technique européenne: **ETA-12/0554; 2018-09-11**

Organisme d'évaluation technique: **DIBt**

Organisme(s) notifié(s): **1343 – MPA Darmstadt**

7. Performance(s) déclarée(s):

Résistance mécanique et stabilité (BWR 1)

- **Valeurs caractéristiques de résistance: Voir annexe, en particulier annexes C 1 - C 8**
- **Déplacements: Voir annexe, en particulier annexe C 5**

Protection contre le feu (BWR 2)

- **Réaction au feu: La cheville remplit les exigences de la classe A 1**

Hygiène, santé et protection de l'environnement (BWR 3)

- **Contenu, émission et / ou libération de substances dangereuses: NPD**

8. Documentation technique appropriée et/ou documentation technique spécifique: ---

Les performances du produit identifié ci-dessus sont conformes aux performances déclarées. Conformément au règlement (UE) no 305/2011, la présente déclaration des performances est établie sous la seule responsabilité du fabricant mentionné ci-dessus.

Signé pour le fabricant et en son nom par:

Andreas Bucher, Dipl.-Ing.

Wolfgang Hengesbach, Dipl.-Ing., Dipl.-Wirtsch.-Ing.

Tumlingen, 2018-11-18

- Cette déclaration des performances a été émise en différentes langues. En cas de divergences d'interprétation, la version anglaise prévaut toujours.

- L'annexe contient des informations volontaires et complémentaires en langue anglaise dépassant les exigences légales (spécifiées en langage neutre).

Specific Part**1 Technical description of the product**

The fischer Injection system FIS HT II for masonry is a bonded anchor (injection type) consisting of a mortar cartridge with injection mortar FIS HT II, FIS HT II Low Speed and FIS HT II High Speed, a perforated sieve sleeve and an anchor rod with hexagon nut and washer or an internal threaded rod. The steel elements are made of zinc coated steel, stainless steel or high corrosion resistant steel.

The anchor rod is placed into a drilled hole filled with injection mortar and is anchored via the bond between steel element, injection mortar and masonry and mechanical interlock.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment**3.1 Mechanical resistance and stability (BWR 1)**

Essential characteristic	Performance
Characteristic values for resistance	See Annexes C 1 to C 8
Displacements	See Annex C 5

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1

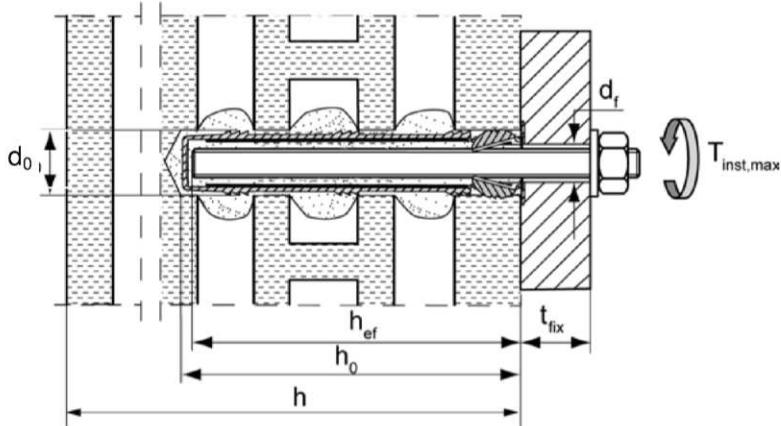

3.3 Hygiene, health and the environment (BWR 3)

Essential characteristic	Performance
Content, emission and/or release of dangerous substances	No performance assessed

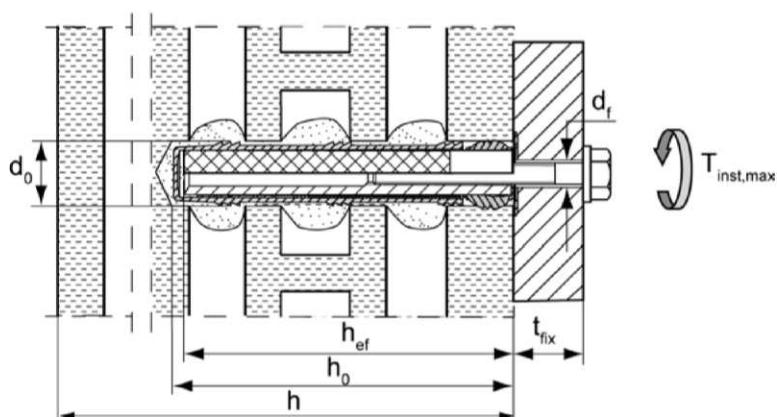

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330076-00-0604 the applicable European legal act is: [97/177/EC].

The system to be applied is: 1

fischer Injection system FIS HT II for masonry**Product description**
Materials**Annex A 4**

Specifications of intended use

Anchorage subject to:

- Static and quasi-static loads

Base materials:

- Solid brick masonry (Use category b) and autoclaved aerated concrete (Use category d), acc. to Annex B8.
Note: The characteristic resistance is also valid for larger brick sizes and higher compressive strength of the masonry unit.
- Hollow brick masonry (use category c), according to Annex B8
- Mortar strength class of the masonry M2,5 at minimum according to EN 998-2:2010
- For other bricks in solid masonry, hollow or perforated masonry and autoclaved aerated concrete, the characteristic resistance of the anchor may be determined by job site tests according to Technical Report TR 053 under consideration of the β -factor according to Annex C6, Table C4

Temperature Range:

- From - 40°C to +80°C (max. short term temperature +80°C and max. long term temperature +50°C)

Use conditions (Environmental conditions):

- Dry and wet structure (regarding injection mortar)
- Structures subject to dry internal conditions exist
(zinc coated steel, stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure including industrial and marine environment or exposure to permanently damp internal condition, if no particular aggressive conditions exist
(stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure and to permanently damp internal condition, if other particular aggressive conditions exist (high corrosion resistant steel)
Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used)

fischer Injection system FIS HT II for masonry	Annex B 1
Intended Use Specifications	

Specifications of intended use

Design:

- The anchorages have to be designed in accordance with the Technical Report TR 054, Design method A under the responsibility of an engineer experienced in anchorages and masonry work
Applies to all bricks, if no other values are specified:

$$N_{Rk} = N_{Rk,s} = N_{Rk,p} = N_{Rk,b} = N_{Rk,pb}$$

$$V_{Rk} = V_{Rk,s} = V_{Rk,b} = V_{Rk,c} = V_{Rk,pb}$$

- Verifiable calculation notes and drawings have to be prepared taking account the relevant masonry in the region of the anchorage, the loads to be transmitted and their transmission to the supports of the structure. The position of the anchor is indicated on the design drawings

Installation:

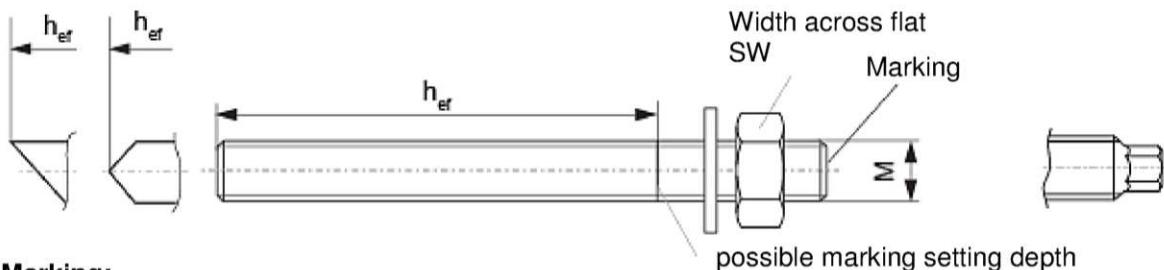

- Category d/d: -Installation and use in dry structures
- Category w/w: -Installation and use in dry and wet structures
- Hole drilling by hammer drill mode
- In case of aborted hole: The hole shall be filled with mortar
- Bridging of unbearing layer (e.g. plaster) see Annex B 4 (Table B1.3)
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- Fastening screws or threaded rods (including nut and washer) must comply with the appropriate material and property class of the fischer internal threaded anchor FIS E
- minimum curing time see Annex B5. Table B3
- Commercial standard threaded rods, washers and hexagon nuts may also be used if the following requirements are fulfilled:

Material dimensions and mechanical properties of the metal parts according to the specifications are given in Annex A4, Table A1

Conformation of material and mechanical properties of the metal parts by inspection certificate 3.1 according to EN 10204:2004, the documents shall be stored

Marking of the threaded rod with the envisage embedment depth. This may be done by the manufacturer of the rod or by a person on job site

fischer Injection system FIS HT II for masonry	Annex B 2

Annex B 5

Installation instructions Part 1

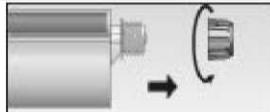

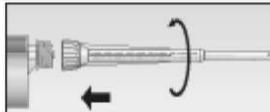

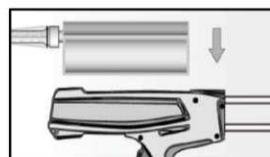

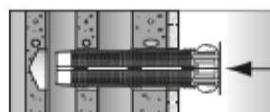

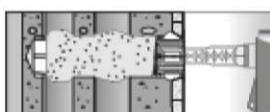

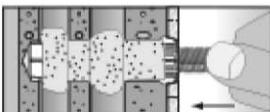

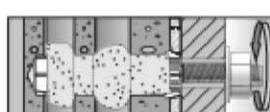

Installation and Preparing the cartridge in solid brick and autoclaved aerated concrete (without perforated sleeve)

1		Drill the hole. Depth of drill hole h_0 and drill hole diameter d_0 see Table B1.1 or B1.2
2		Blow out the drill hole two times. Brush the drill hole two times (see Table B2) and blow out two times again
3		Remove sealing cap
		Screw on the static mixer (the spiral in the static mixer must be clearly visible)
4		Place the cartridge into a suitable dispenser.
		Press out approximately 10 cm of material until the mortar is permanently grey in colour. Mortar which is not grey in colour will not cure and must be disposed off.
5		Fill approximately 2/3 of the drill hole with mortar Always begin from the bottom of the hole to eliminate voids ¹⁾ .
		For push through installation (not FIS E) fill the annular gap also with mortar.
6		Only use clean and oil-free anchor elements. Mark the threaded rod for setting depth. Press the threaded rod or internal threaded anchor FIS E down to the bottom of the hole, turning it slightly by hand while doing. After inserting the anchor element, excess mortar must emerge around the anchor element.
7		Do not touch. Minimum curing time t_{cure} see Table B3
		Mounting the fixture $T_{\text{inst,max}}$ see Table B1.1 or B1.2

¹⁾ For the exact quantity of mortar see manufacturer's specification.

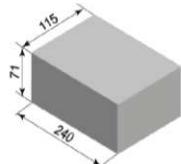

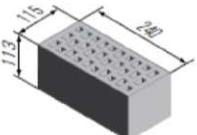

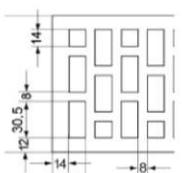

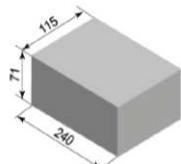

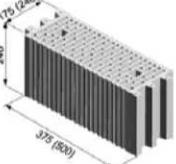

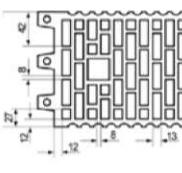

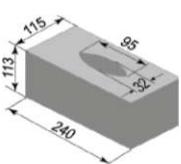

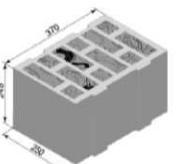

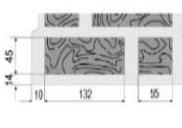

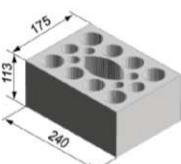

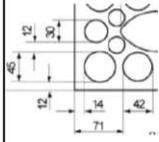

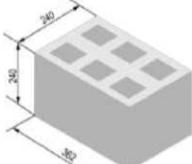

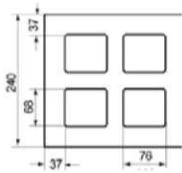

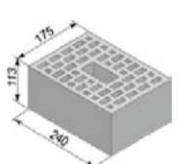

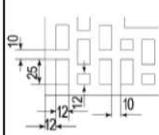

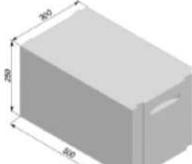

Installation instructions Part 2

Installation in perforated or solid brick with perforated sleeve (pre-positioned anchorage)

1		Drill the hole (hammer drill). Depth of drill hole h_0 and drill hole diameter d_0 see Table B1.3	When install perforated sleeves in solid bricks or solid areas of hollow bricks, also clean the hole by blowing out and brushing	
2		Remove the sealing cap		Screw on the static mixer (the spiral in the static mixer must be clearly visible)
3		Place the cartridge into a suitable dispenser		Press out approximately 10 cm of material until the mortar is permanently grey in colour. Mortar which is not grey in colour will not cure and must be disposed off
4		Insert the perforated sleeve flush with the surface of the masonry or plaster.		Fill the perforated sleeve completely with mortar beginning from the bottom of the hole ¹⁾ .
5		Only use clean and oil-free anchor elements. Mark the threaded rod for setting depth. Insert the threaded rod or the internal threaded anchor FIS E by hand using light turning motions until reaching the setting depth marking (threaded rod) or flush with the surface (internal threaded anchor).		
6		Do not touch. Minimum curing time t_{cure} see Table B3		Mounting the fixture. $T_{inst,max}$ see Table B1.3

¹⁾ For the exact quantity of mortar see manufacturer's specification.

DÉCLARATION DES PERFORMANCES

fischer innovative solutions

DoP: 0163

pour système d'injection fischer FIS HT II (Scellement chimique pour utilisation dans le béton) – FR

1. Code d'identification unique du produit type: **DoP: 0163**
2. Usage(s) prévu(s): **Cheville de fixation dans du béton fissuré ou non fissuré, voir annexe, en particulier annexes B 1 - B 8**
3. Fabricant: **fischerwerke GmbH & Co. KG, Klaus-Fischer-Straße 1, 72178 Waldachtal, Allemagne**
4. Mandataire: --
5. Système(s) d'évaluation et de vérification de la constance des performances: **1**
6. Document d'évaluation européen: **ETAG 001; 2013-04**
Évaluation technique européenne: **ETA-12/0556; 2017-12-04**
Organisme d'évaluation technique: **DIBt**
Organisme(s) notifié(s): **1343 – MPA Darmstadt**

7. Performance(s) déclarée(s):

Résistance mécanique et stabilité (BWR 1), Sécurité pendant l'utilisation (BWR 4)

- **Valeurs caractéristiques sous charge statique et quasi-statique, Déplacements: Voir annexe, en particulier annexes C 1 - C 6**

Protection contre le feu (BWR 2)

- **Réaction au feu: La cheville remplit les exigences de la classe A 1**
- **Résistance au feu: NPD**

8. Documentation technique appropriée et/ou documentation technique spécifique: ---

Les performances du produit identifié ci-dessus sont conformes aux performances déclarées. Conformément au règlement (UE) no 305/2011, la présente déclaration des performances est établie sous la seule responsabilité du fabricant mentionné ci-dessus.

Signé pour le fabricant et en son nom par:

Andreas Bucher, Dipl.-Ing.

Wolfgang Hengesbach, Dipl.-Ing., Dipl.-Wirtsch.-Ing.

Tumlingen, 2017-12-12

- Cette déclaration des performances a été émise en différentes langues. En cas de divergences d'interprétation, la version anglaise prévaut toujours.
- L'annexe contient des informations volontaires et complémentaires en langue anglaise dépassant les exigences légales (spécifiées en langage neutre).

Specific Part**1 Technical description of the product**

The fischer injection system FIS HT II is a bonded anchor consisting of a cartridge with injection mortar fischer FIS HT II, FIS HT II High Speed or FIS HT II Low Speed and a steel element.

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment**3.1 Mechanical resistance and stability (BWR 1)**

Essential characteristic	Performance
Characteristic values for static and quasi-static action, displacements	See Annex C 1 to C 6

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorages satisfy requirements for Class A1
Resistance to fire	No performance assessed

3.3 Hygiene, health and the environment (BWR 3)

Regarding dangerous substances there may be requirements (e.g. transposed European legislation and national laws, regulations and administrative provisions) applicable to the products falling within the scope of this European Technical Assessment. In order to meet the provisions of Regulation (EU) No 305/2011, these requirements need also to be complied with, when and where they apply.

3.4 Safety in use (BWR 4)

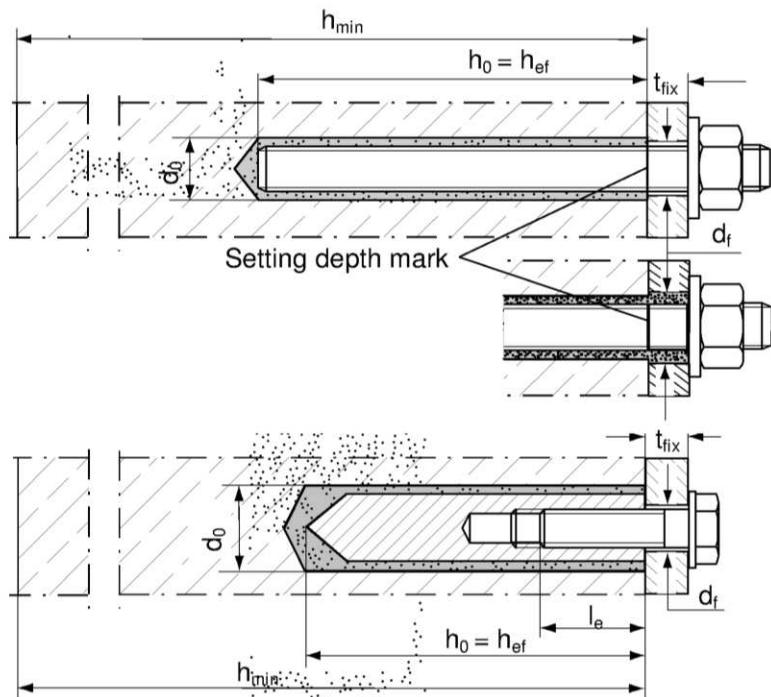

The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with guideline for European technical approval ETAG 001, April 2013 used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

Product description Materials			Annex A 3	

Specifications of intended use (part 1)**Table B1:** Overview use and performance categories

Anchorage subject to		FIS HT II, FIS HT II High Speed or FIS HT II Low Speed with ...					
		Anchor rod	fischer internal threaded anchor RG MI				
Hammer drilling with standard drill bit		all sizes					
Hammer drilling with hollow drill bit (Heller "Duster Expert" or Hilti "TE-CD, TE-YD")		Nominal drill bit diameter (d_0) 12 mm to 35 mm					
Static and quasi static load, in	uncracked concrete	M6 to M30	Tables: C1, C3, C4, C6	M8 to M20	Tables: C2, C3, C5, C7		
	cracked concrete	M10 to M20		not assessed			
Use category	dry or wet concrete	M6 to M30		M8 to M20			
	flooded hole ¹⁾	M12 to M30		M8 to M20			
Installation temperature	-10 °C to +40 °C						
In-service temperature	Temperature range I	-40 °C to +80 °C	(max. long term temperature +50 °C and max. short term temperature +80 °C)				
	Temperature range II	-40 °C to +120 °C	(max. long term temperature +72 °C and max. short term temperature +120 °C)				
¹⁾ Only with coaxial cartridges: 380 ml, 400 ml, 410 ml							
fischer injection system FIS HT II							
Intended Use Specifications (part 1)				Annex B 1			

Specifications of intended use (part 2)

Base materials:

- Reinforced or unreinforced normal weight concrete Strength classes C20/25 to C50/60 according to EN 206-1:2000

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (zinc coated steel, stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist (stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure, to permanently damp internal conditions or in other particular aggressive conditions (high corrosion resistant steel)

Note: Particular aggressive conditions are e. g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e. g. in desulphurization plants or road tunnels where de-icing materials are used)

Design:

- Anchorages have to be designed by a responsible engineer with experience of concrete anchor design
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.)
- Anchorages under static or quasi-static actions are designed in accordance with EOTA Technical Report TR 029 "Design of bonded anchors" Edition September 2010 or CEN/TS 1992-4: 2009

Installation:

- Anchor installation is to be carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- In case of aborted hole: The hole shall be filled with mortar
- Anchorage depth should be marked and adhered to on installation
- Overhead installation is allowed

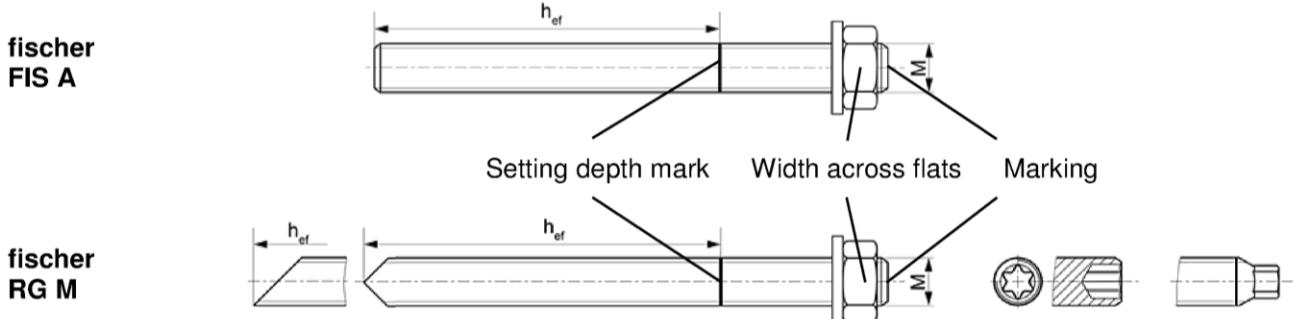

fischer injection system FIS HT II	Annex B 2
Intended Use Specifications (part 2)	

Table B2: Installation parameters for anchor rods

Size		M6	M8	M10	M12	M16	M20	M24	M27	M30		
Width across flats	SW	[mm]	10	13	17	19	24	30	36	41	46	
Nominal drill bit diameter	d_0		8	10	12	14	18	24	28	30	35	
Drill hole depth	h_0		$h_0 = h_{\text{ef}}$									
Effective anchorage depth	$h_{\text{ef,min}}$		50	60	60	70	80	90	96	108	120	
	$h_{\text{ef,max}}$		72	160	200	240	320	400	480	540	600	
Minimum spacing and minimum edge distance	$s_{\text{min}} = c_{\text{min}}$		40	40	45	55	65	85	105	125	140	
Diameter of clearance hole in the fixture ¹⁾	pre-positioned anchorage		7	9	12	14	18	22	26	30	33	
	push through anchorage		9	11	14	16	20	26	30	32	40	
Minimum thickness of concrete member	h_{min}		$h_{\text{ef}} + 30$ (≥ 100)				$h_{\text{ef}} + 2d_0$					
Maximum installation torque	$T_{\text{inst,max}}$	[Nm]	5	10	20	40	60	120	150	200	300	

¹⁾ For larger clearance holes in the fixture see TR 029, 4.2.2.1 or CEN/TS 1992-4-1:2009, 5.2.3.1

Anchor rods:

Marking (on random place) fischer anchor rod:

Property class 8.8, stainless steel A4 property class 80 and high corrosion resistant steel C property class 80: •

Stainless steel A4 property class 50 and high corrosion resistant steel C property class 50: ••
Or colour coding according to DIN 976-1

Commercial standard threaded rods, washers and hexagon nuts may also be used if the following requirements are fulfilled:

- Materials, dimensions and mechanical properties according Annex A 3, Table A1
- Inspection certificate 3.1 according to EN 10204:2004, the documents have to be stored
- Setting depth is marked

fischer injection system FIS HT II

Intended Use

> +30 to +40	---	2 min	4 min	---	35 min	30 min

¹⁾ In wet concrete or flooded holes the curing times must be doubled

fischer injection system FIS HT II

Intended Use
 Cleaning tools
 Processing times and curing times

Annex B 5

Installation instructions part 1

Drilling and cleaning the hole (hammer drilling with standard drill bit)

1		<p>Drill the hole. Drill hole diameter d_0 and drill hole depth h_0 see Tables B2, B3</p>
2		<p>Clean the drill hole: For $h_{ef} \leq 12d$ and $d_0 < 18 \text{ mm}$ blow out the hole four times by hand</p>
3		<p>Brush the drill hole four times. For deep holes use an extension. Corresponding brushes see Table B4</p>
4		<p>Clean the drill hole: For $h_{ef} \leq 12d$ and $d_0 < 18 \text{ mm}$ blow out the hole four times by hand</p>

Go to step 5

Drilling and cleaning the hole (hammer drilling with hollow drill bit)

1		<p>Check a suitable hollow drill (see Table B1) for correct operation of the dust extraction</p>
2		<p>Use a suitable dust extraction system, e. g. Bosch GAS 35 M AFC or a comparable dust extraction system with equivalent performance data</p> <p>Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power. Diameter of drill hole d_0 and drill hole depth h_0 see Tables B2, B3</p>

Go to step 5

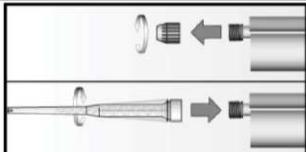

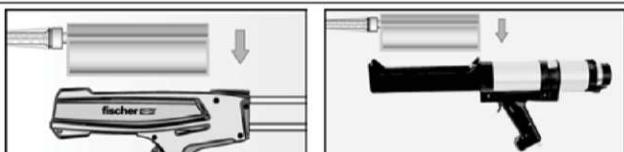

fischer injection system FIS HT II

Intended use
Installation instructions part 1

Annex B 6

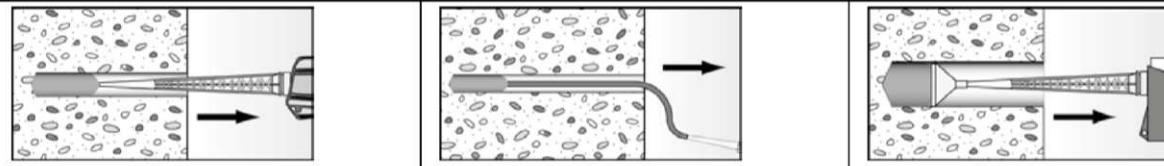

Installation instructions part 2

Preparing the cartridge

5		Remove the sealing cap Screw on the static mixer (the spiral in the static mixer must be clearly visible)
6		Place the cartridge into the dispenser
7		Extrude approximately 10 cm of material until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey

Go to step 8

Mörtelinjektion

8		Fill approximately 2/3 of the drill hole with mortar. Always begin from the bottom of the hole and avoid bubbles For drill hole depth ≥ 150 mm use an extension tube For overhead installation, deep holes ($h_0 > 250$ mm) or drill hole diameter ($d_0 \geq 40$ mm) use an injection-adapter
---	---	---

Go to step 9

fischer injection system FIS HT II

Intended use
Installation instructions part 2

Annex B 7

Installation instructions part 3

Installation of anchor rods or fischer internal threaded anchors RG MI

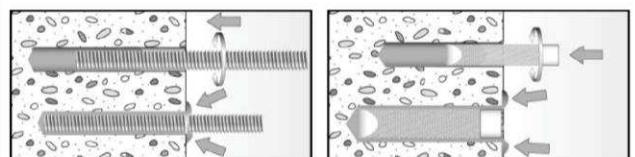

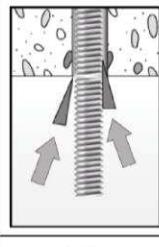

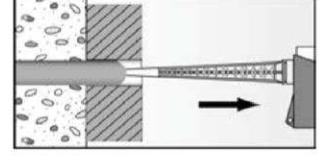

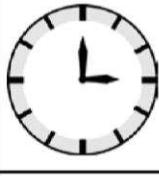

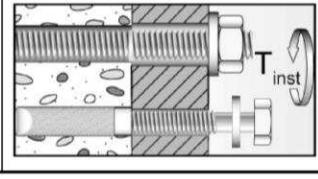

9		<p>Only use clean and oil-free anchor elements. Mark the setting depth of the anchor. Push the anchor rod or fischer internal threaded RG MI anchor down to the bottom of the hole, turning it slightly while doing so. After inserting the anchor element, excess mortar must be emerged around the anchor element.</p>
	 <p>For overhead installations support the anchor rod with wedges. (e. g. fischer centering wedges)</p>	 <p>For push through installation fill the annular gap with mortar</p>
10	 <p>Wait for the specified curing time t_{cure} see Table B5</p>	 <p>11</p> <p>Mounting the fixture $T_{inst,max}$ see Tables B2 and B3</p>
fischer injection system FIS HT II		
Intended use Installation instructions part 3		Annex B 8

DÉCLARATION DES PERFORMANCES

fischer innovative solutions

DoP: 0164

pour système d'injection fischer HT II pour maçonnerie (Chevilles métalliques à injection pour maçonnerie) – FR

1. Code d'identification unique du produit type: **DoP: 0164**

2. Usage(s) prévu(s): **Ancrages de maçonnerie pour lesquels des exigences de résistance mécanique et de stabilité ainsi que de sécurité d'utilisation doivent être remplies. Ils servent à fixer et/ou ancrer des éléments structuraux (contribuant à la stabilité des systèmes) ou des éléments lourds, voir annexe, en particulier annexes B 1 - B 10**

3. Fabricant: **fischerwerke GmbH & Co. KG, Klaus-Fischer-Straße 1, 72178 Waldachtal, Allemagne**

4. Mandataire: --

5. Système(s) d'évaluation et de vérification de la constance des performances: **1**

6. Document d'évaluation européen: **EAD 330076-00-0604**

Évaluation technique européenne: **ETA-12/0554; 2018-09-11**

Organisme d'évaluation technique: **DIBt**

Organisme(s) notifié(s): **1343 – MPA Darmstadt**

7. Performance(s) déclarée(s):

Résistance mécanique et stabilité (BWR 1)

- **Valeurs caractéristiques de résistance: Voir annexe, en particulier annexes C 1 - C 8**
- **Déplacements: Voir annexe, en particulier annexe C 5**

Protection contre le feu (BWR 2)

- **Réaction au feu: La cheville remplit les exigences de la classe A 1**

Hygiène, santé et protection de l'environnement (BWR 3)

- **Contenu, émission et / ou libération de substances dangereuses: NPD**

8. Documentation technique appropriée et/ou documentation technique spécifique: ---

Les performances du produit identifié ci-dessus sont conformes aux performances déclarées. Conformément au règlement (UE) no 305/2011, la présente déclaration des performances est établie sous la seule responsabilité du fabricant mentionné ci-dessus.

Signé pour le fabricant et en son nom par:

Andreas Bucher, Dipl.-Ing.

Wolfgang Hengesbach, Dipl.-Ing., Dipl.-Wirtsch.-Ing.

Tumlingen, 2018-11-18

- Cette déclaration des performances a été émise en différentes langues. En cas de divergences d'interprétation, la version anglaise prévaut toujours.

- L'annexe contient des informations volontaires et complémentaires en langue anglaise dépassant les exigences légales (spécifiées en langage neutre).

Specific Part**1 Technical description of the product**

The fischer Injection system FIS HT II for masonry is a bonded anchor (injection type) consisting of a mortar cartridge with injection mortar FIS HT II, FIS HT II Low Speed and FIS HT II High Speed, a perforated sieve sleeve and an anchor rod with hexagon nut and washer or an internal threaded rod. The steel elements are made of zinc coated steel, stainless steel or high corrosion resistant steel.

The anchor rod is placed into a drilled hole filled with injection mortar and is anchored via the bond between steel element, injection mortar and masonry and mechanical interlock.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment**3.1 Mechanical resistance and stability (BWR 1)**

Essential characteristic	Performance
Characteristic values for resistance	See Annexes C 1 to C 8
Displacements	See Annex C 5

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1

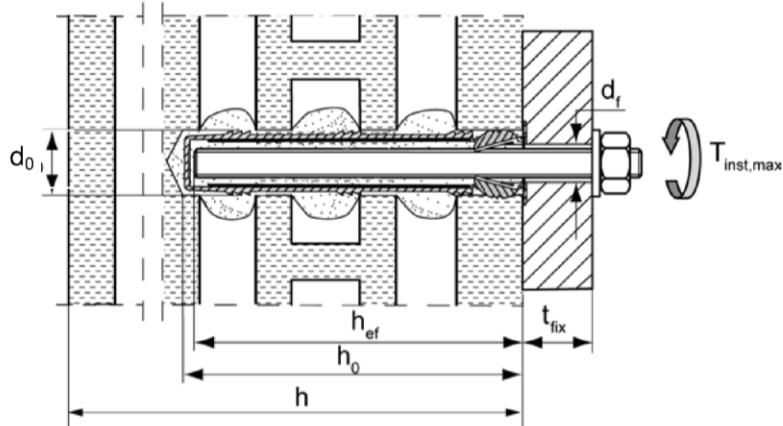

3.3 Hygiene, health and the environment (BWR 3)

Essential characteristic	Performance
Content, emission and/or release of dangerous substances	No performance assessed

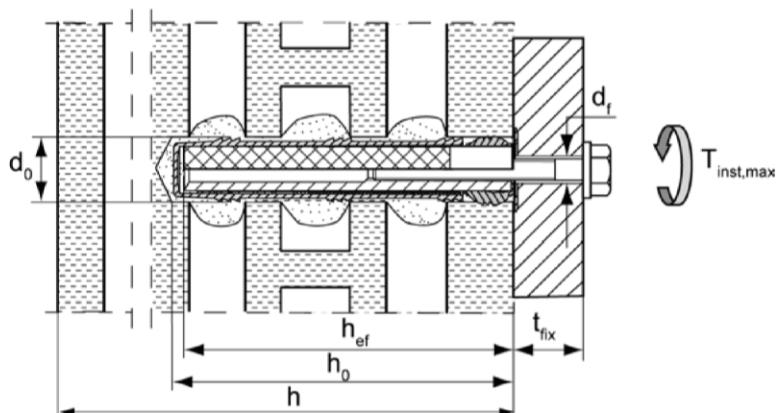

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330076-00-0604 the applicable European legal act is: [97/177/EC].

The system to be applied is: 1

fischer Injection system FIS HT II for masonry**Product description**
Materials**Annex A 4**

Specifications of intended use

Anchorage subject to:

- Static and quasi-static loads

Base materials:

- Solid brick masonry (Use category b) and autoclaved aerated concrete (Use category d), acc. to Annex B8.
Note: The characteristic resistance is also valid for larger brick sizes and higher compressive strength of the masonry unit.
- Hollow brick masonry (use category c), according to Annex B8
- Mortar strength class of the masonry M2,5 at minimum according to EN 998-2:2010
- For other bricks in solid masonry, hollow or perforated masonry and autoclaved aerated concrete, the characteristic resistance of the anchor may be determined by job site tests according to Technical Report TR 053 under consideration of the β -factor according to Annex C6, Table C4

Temperature Range:

- From - 40°C to +80°C (max. short term temperature +80°C and max. long term temperature +50°C)

Use conditions (Environmental conditions):

- Dry and wet structure (regarding injection mortar)
- Structures subject to dry internal conditions exist
(zinc coated steel, stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure including industrial and marine environment or exposure to permanently damp internal condition, if no particular aggressive conditions exist
(stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure and to permanently damp internal condition, if other particular aggressive conditions exist (high corrosion resistant steel)
Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used)

fischer Injection system FIS HT II for masonry	Annex B 1
Intended Use Specifications	

Specifications of intended use

Design:

- The anchorages have to be designed in accordance with the Technical Report TR 054, Design method A under the responsibility of an engineer experienced in anchorages and masonry work
Applies to all bricks, if no other values are specified:

$$N_{Rk} = N_{Rk,s} = N_{Rk,p} = N_{Rk,b} = N_{Rk,pb}$$

$$V_{Rk} = V_{Rk,s} = V_{Rk,b} = V_{Rk,c} = V_{Rk,pb}$$

- Verifiable calculation notes and drawings have to be prepared taking account the relevant masonry in the region of the anchorage, the loads to be transmitted and their transmission to the supports of the structure. The position of the anchor is indicated on the design drawings

Installation:

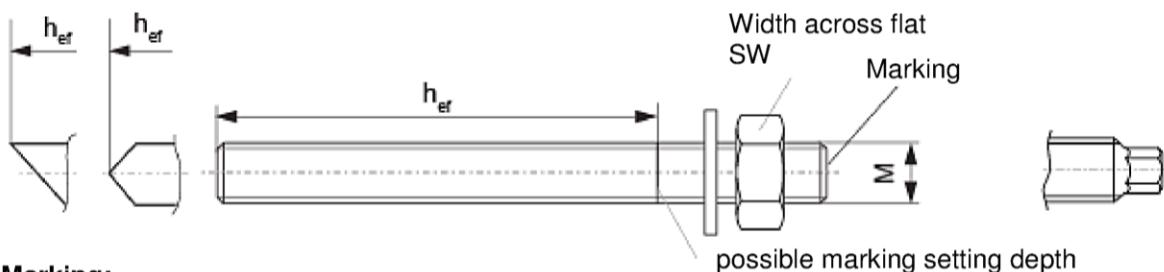

- Category d/d: -Installation and use in dry structures
- Category w/w: -Installation and use in dry and wet structures
- Hole drilling by hammer drill mode
- In case of aborted hole: The hole shall be filled with mortar
- Bridging of unbearing layer (e.g. plaster) see Annex B 4 (Table B1.3)
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- Fastening screws or threaded rods (including nut and washer) must comply with the appropriate material and property class of the fischer internal threaded anchor FIS E
- minimum curing time see Annex B5. Table B3
- Commercial standard threaded rods, washers and hexagon nuts may also be used if the following requirements are fulfilled:

Material dimensions and mechanical properties of the metal parts according to the specifications are given in Annex A4, Table A1

Conformation of material and mechanical properties of the metal parts by inspection certificate 3.1 according to EN 10204:2004, the documents shall be stored

Marking of the threaded rod with the envisage embedment depth. This may be done by the manufacturer of the rod or by a person on job site

Installation instructions Part 1

Installation and Preparing the cartridge in solid brick and autoclaved aerated concrete (without perforated sleeve)

1		Drill the hole. Depth of drill hole h_0 and drill hole diameter d_0 see Table B1.1 or B1.2
2		Blow out the drill hole two times. Brush the drill hole two times (see Table B2) and blow out two times again
3		Remove sealing cap 
4		Press out approximately 10 cm of material until the mortar is permanently grey in colour. Mortar which is not grey in colour will not cure and must be disposed off.
5		Fill approximately 2/3 of the drill hole with mortar Always begin from the bottom of the hole to eliminate voids ¹⁾ .
6		For push through installation (not FIS E) fill the annular gap also with mortar.
7		Mounting the fixture $T_{inst,max}$ see Table B1.1 or B1.2

¹⁾ For the exact quantity of mortar see manufacturer's specification.

Installation instructions Part 2

Installation in perforated or solid brick with perforated sleeve (pre-positioned anchorage)

1		Drill the hole (hammer drill). Depth of drill hole h_0 and drill hole diameter d_0 see Table B1.3	When install perforated sleeves in solid bricks or solid areas of hollow bricks, also clean the hole by blowing out and brushing
2		Remove the sealing cap	
3		Place the cartridge into a suitable dispenser	
4		Insert the perforated sleeve flush with the surface of the masonry or plaster .	Fill the perforated sleeve completely with mortar beginning from the bottom of the hole ¹⁾ .
5		Only use clean and oil-free anchor elements. Mark the threaded rod for setting depth. Insert the threaded rod or the internal threaded anchor FIS E by hand using light turning motions until reaching the setting depth marking (threaded rod) or flush with the surface (internal threaded anchor).	
6		Do not touch. Minimum curing time t_{cure} see Table B3	

¹⁾ For the exact quantity of mortar see manufacturer's specification.

Specific Part

1 Technical description of the product

The fischer Injection system FIS HT II for masonry is a bonded anchor (injection type) consisting of a mortar cartridge with injection mortar FIS HT II, FIS HT II High Speed or FIS HT II Low Speed, a perforated sieve sleeve and an anchor rod with hexagon nut and washer or an internal threaded rod. The steel elements are made of zinc coated steel, stainless steel or high corrosion resistant steel.

The anchor rod is placed into a drilled hole filled with injection mortar and is anchored via the bond between steel element, injection mortar and masonry and mechanical interlock.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic values for resistance	See Annexes C 1 to C 35
Displacements	See Annex C 36
Durability	See Annex B2

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1

3.3 Hygiene, health and the environment (BWR 3)

Essential characteristic	Performance
Content, emission and/or release of dangerous substances	No performance assessed

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

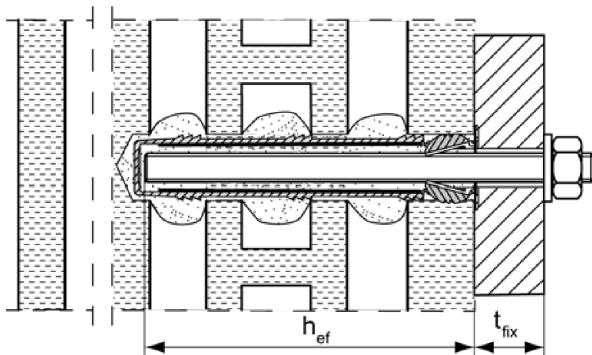

In accordance with the European Assessment Document EAD 330076-00-0604 the applicable European legal act is: [97/177/EC].

The system to be applied is: 1

fischer injektion system FIS HT II masonry			Annex B 1 Appendix 7 / 55
Intended Use Specifications (part 1)			

Specifications of intended use (part 2)

Anchors subject to:

- Static and quasi-static loads

Base materials:

- Solid brick masonry (masonry group b), acc. to Annex B 13
- Hollow brick masonry (masonry group c), according to Annex B 13
- For minimum thickness of masonry member is $h_{ef}+30\text{mm}$
- Mortar strength class of the masonry M2,5 at minimum according to EN 998-2:2010
- For other bricks in solid masonry, hollow or perforated masonry, the characteristic resistance of the anchor may be determined by job site tests according to Technical Report TR 053, April 2016, Annex C under consideration of the β -factor according to Annex C 36, Table C36.1

Note (only applies to solid bricks):

The characteristic resistance is also valid for larger brick sizes, higher compressive strength and higher raw density of the masonry unit.

Temperature Range:

- I: From - 40°C to +80°C (max. short term temperature +80°C and max. long term temperature +50°C)
- II: From -40°C to +120°C (max. short term temperature +120°C and max. long term temperature +72°C)

Use conditions (Environmental conditions):

- Dry and wet structure (regarding injection mortar)
- Structures subject to dry internal conditions exist
(zinc coated steel, stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure including industrial and marine environment or exposure to permanently damp internal condition, if no particular aggressive conditions exist exist
(stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure and to permanently damp internal condition, if other particular aggressive conditions exist (high corrosion resistant steel)

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used)

fischer injektion system FIS HT II masonry

Intended Use
Specifications (part 2)

Annex B 2

Appendix 8/ 55

Specifications of intended use (part 3)

Design:

- The anchorages have to be designed in accordance with the Technical Report TR054, April 2016, Design method A under the responsibility of an engineer experienced in anchorages and masonry work.

Applies to all bricks, if no other values are specified:

$$N_{Rk} = N_{Rk,b} = N_{Rk,p}$$

$$V_{Rk} = V_{Rk,b} = V_{Rk,c}$$

For the Calculation of pulling out a brick under tensile load $N_{Rk,pb}$ or

pushing out a brick under shear load $V_{Rk,pb}$ see Technical Report TR 054, April 2016.

$N_{Rk,s}$, $V_{Rk,s}$ and $M_{Rk,s}$ see annex C1-C3

Factors for job site tests and displacements see Annex C36

- Verifiable calculation notes and drawings have to be prepared taking account the relevant masonry in the region of the anchorage, the loads to be transmitted and their transmission to the supports of the structure. The position of the anchor is indicated on the design drawings.

Installation:

- Condition d/d: - Installation and use in dry structures
- Condition w/w: - Installation and use in dry and wet structures
- Condition w/d: - Installation in wet structures and use in dry structures
- Hole drilling see Annex C (drilling method)
- In case of aborted hole: The hole shall be filled with mortar
- Bridging of unbearing layer (e.g. plaster) see Annex B 6, Table B6.1
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- Fastening screws or anchor rods (including nut and washer) must comply with the appropriate material and property class of the fischer internal threaded anchor FIS E.
- minimum curing time see Annex B 8, Table B8.2
- Commercial standard threaded rods, washers and hexagon nuts may also be used if the following requirements are fulfilled:

Material dimensions and mechanical properties of the metal parts according to the specifications are given in Annex A 5, Table 5.1

Conformation of material and mechanical properties of the metal parts by inspection certificate 3.1 according to EN 10204:2004, the documents shall be stored

Marking of the anchor rod with the envisage embedment depth. This may be done by the manufacturer of the rod or by a person on job site

Installation instruction part 1

Installation in solid brick (without perforated sleeve)

1		Drill the hole (drilling method see Annex C of the respective brick) depth of drill hole h_0 and drill hole diameter d_0 see Tables B4.1; B5.1		
2				Blow out the drill hole twice. Brush twice and blow out twice again.
3		Remove the sealing cap. Screw on the static mixer. (the spiral in the static mixer must be clearly visible)		
4		Place the cartridge into a suitable dispenser		Press out approximately 10 cm of mortar until the resin is permanently grey in colour. Mortar which is not grey in colour will not cure and must be disposed of.
5		Fill approximately 2/3 of the drill hole with mortar beginning from the bottom of the hole ¹⁾ . Avoid bubbles!		For push through anchorage fill the annular clearance with mortar.
6		Only use clean and oil-free anchor elements. Mark the anchor rod for setting depth. Insert the anchor rod or internal threaded anchor FIS E by hand using light turning motions. When reaching the setting depth marking, excess mortar must emerge from the mouth of the drill hole.		
7		Do not touch. Minimum curing time see Table B8.2		Mounting the fixture. $T_{inst,max}$ see parameter of brick.

¹⁾ Exact volume of mortar see manufacturer's specification.

fischer injektion system FIS HT II masonry

Intended use

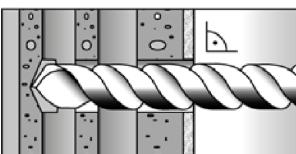

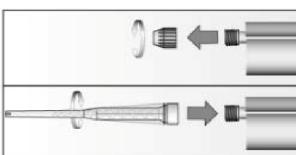

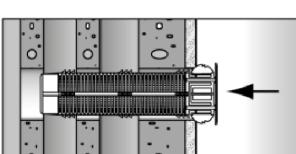

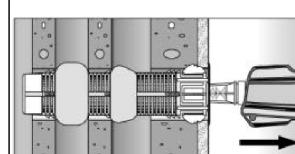

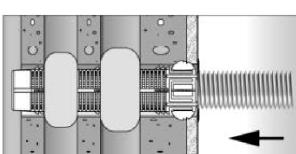

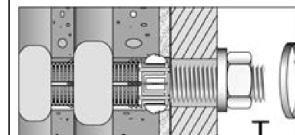

Installation instruction (without perforated sleeve) part 1

Annex B 9

Appendix 15/ 55

Installation instruction part 2

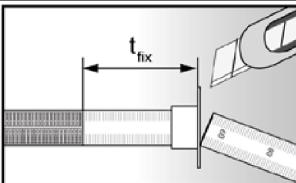

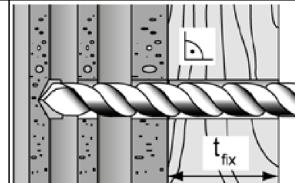

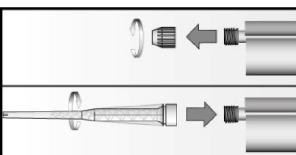

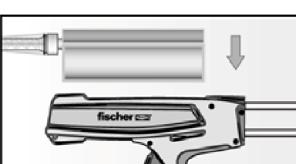

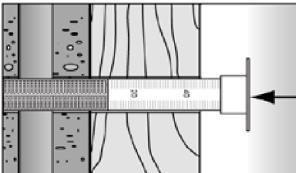

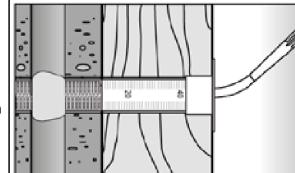

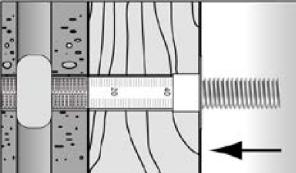

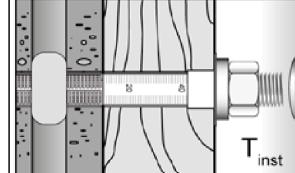

Installation in perforated or solid brick with perforated sleeve (pre-positioned anchorage)

1		Drill the hole (drilling method see Annexes C). depth of drill hole h_0 and drill hole diameter d_0 see Table B6.1	When install perforated sleeves in solid bricks or solid areas of hollow bricks, also clean the hole by blowing out and brushing.
2		Remove the sealing cap. Screw on the static mixer. (the spiral in the static mixer must be clearly visible)	
3		Place the cartridge into a suitable dispenser.	 Press out approximately 10 cm of mortar until the resin is permanently grey in colour. Mortar which is not grey in colour will not cure and must be disposed of.
4		Insert the perforated sleeve flush with the surface of the masonry or plaster.	 Fill the perforated sleeve completely with mortar beginning from the bottom of the hole ¹⁾ .
5		Only use clean and oil-free anchor elements. Mark the anchor rod for setting depth. Insert the anchor rod or the internal threaded anchor FIS E by hand using light turning motions until reaching the setting depth marking (anchor rod) or flush with the surface (internal threaded anchor).	
6		Do not touch. Minimum curing time see Table B8.2	 Mounting the fixture. $T_{inst,max}$ see parameter of brick.

¹⁾ Exact volume of mortar see manufacturer's specification.

Installation instruction part 3

Installation in perforated or solid brick with perforated sleeve (push through anchorage)

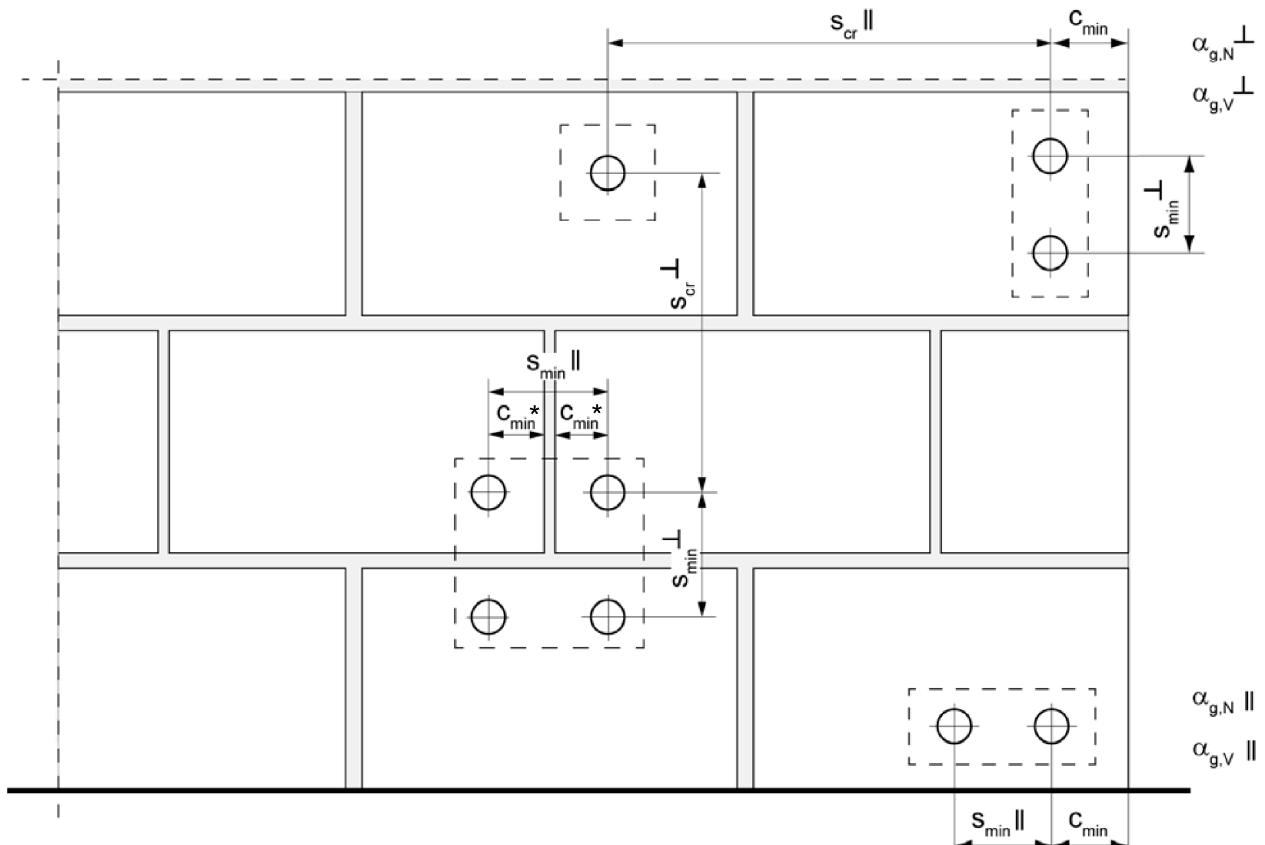

1		Push the movable stop up to the correct thickness of fixture and cut the overlap.		Drill the hole through the fixture. Depth of drill hole ($h_0 + t_{fix}$) and drill hole diameter see Table B7.1
2		Remove the sealing cap. Screw on the static mixer. (the spiral in the static mixer must be clearly visible)		
3		Place the cartridge into a suitable dispenser.		Press out approximately 10 cm of mortar until the resin is permanently grey in colour. Mortar which is not grey in colour will not cure and must be disposed of.
4		Insert the perforated sleeve flush with the surface of the fixture into the drill hole.		Fill the sleeve with mortar beginning from the bottom of the hole. ¹⁾ For deep drill holes use an extension tube.
5		Only use clean and oil-free anchor elements. Mark the anchor rod for setting depth. Insert the anchor rod or the internal threaded anchor FIS E by hand using light turning motions until reaching the setting depth marking (anchor rod) or flush with the surface (internal threaded anchor).		
6		Do not touch. Minimum curing time see Table B8.2		Mounting the fixture. $T_{inst,max}$ see parameter of brick.

¹⁾ Exact volume of mortar see manufacturer's specification.
